

AG / Food Production Group

We are still exploring & conversing over the one farmer vs. multi-farmers sharing the land and its utilization of the distinct parts of the property.

With that being said, It was brought up at the AG tour by Daniel Kearney, that one primary farmer managing the land made most sense. This farmer could then work with a third party be it a non-profit and/or other organizations to bring the diverse pieces into place.

- **The AG theme remains high on the list. As well as collaborations with educational components & some trail management. Keeping with the esthetics of the land was agreed by all**

The people and organizations that we have reached out to are VYCC (who came to the tour), Northwood's Stewardship Center (also came to the tour), GMFTS-FD, Sterling College, Andrew Delabreure, Peter Johnson of Pete's Greens, Ghislain Boisclair, & other community members that came to me.

I have also spoken in depth with Rose Wilson and Daniel Kearney

Other continued conversations include:

- **Footpaths around the exterior perimeter of the land, to the left of the property, keeping clear of the AG fields and keeping with the integrity of the land. Parking & trail access TBD'd. Beach front access for public by water only.**
- **Diversified vegetable farming**
- **Building Structures**
- **Apple trees, grapes, berries**
- **Animal husbandry**
- **Grazing cows for the benefit of free nutrients onto the land as well as the aesthetics.**
- **Irrigation possibilities for water & soil management**
