

Bluff Farm Potential Trail Layout

Foot path, minor improvement only, a few footbridges, basically as close to the water as practical without damaging wetlands or steep areas prone to erosion. Retains a buffer of about 20 yards from other uses

Rec path connection from Prouty Beach Park to existing path in front of hospital. Requires a bridge of about 10 m over the narrows to the main lake. Uses existing improved jeep trails to climb to fields. Mostly runs along the edge of existing fields. For the purpose of maintaining groomed snow, it avoids south and west exposure as much as possible.

Potential additional groomed trail – Provides easier access from the parking area to the waterfront foot trails in the winter, mostly follows existing jeep trail.

Potential areas for single track mountain biking trails – maintains buffer from foot path, must avoid ecologically sensitive areas.
